DESCRIPTION

We used the Trakt API for our project. With trakt, users are able to query a plethora of data on tv shows and movies. This data includes, genres, recommendations, specific episodes and what's currently trending. Thus far, we're only using Trakt to search for movies and tv series by title and display said titles in a list below our search bar. When users navigate to the detailed view of a result, they're presented again with the title of the show, a poster, the year the show began was released and its score.

EXAMPLE QUERIES

A blank query returns highly acclaimed movies and series as follows:

Deadpool
Guardians of the Galaxy
The Dark Knight
Inception
Logan
Doctor Strange
The Avengers
Interstellar
Wonder Woman
Suicide Squad
Game of Thrones
